technology
in Japan

*Investment before disaster
will save your community and economy.*

***JBP makes your country RESILIENT
with Japanese Bosai solutions***

**The focal point
of DRR technology
in Japan**

Japan Bosai Platform

An association of private companies; to save people & economy against disasters

Japan Bosai Platform, JBP is an association of Japanese private companies with leading bosai solutions. Our goal is to make society disaster resilient and sustainable by sharing Japanese bosai solutions with the world.

JBP's strength lies in the cooperation and wide-ranging technologies of its more than 100 member companies and organizations. Unlike a private company, our neutrality enables us to respond rapidly with optimized solutions. We are helping countries around the world to invest before disasters to save lives and strengthen their economies.

Global Platform 2017 in Cancun

Investment before disaster that save your community and economy.

Public-Private-Academic Partnership

JBP is the focal point of disaster risk reduction (DRR) technology in Japan. We are founded on strong support from and collaboration with the Japanese government, academia and the private sector.

Variety of members

About 100 members belonging to diverse industries

Bosai technologies are spread across many industries, meaning JBP is much more than an industry group. All member companies have two common strengths: "bosai" and "export". JBP's 100+ members belong to diverse industries - from think tanks, engineering consultancies, construction, architectural, ICT, manufacturers of professional DRR equipment and hardware, manufacturers of DRR goods and home products, to GIS and remote sensing companies, and many more.

"bosai"?

*"Bosai." Born in Japan. Now global.
A holistic approach to saving lives and economy from disasters.*

Contribution to Sendai Framework & SDGs

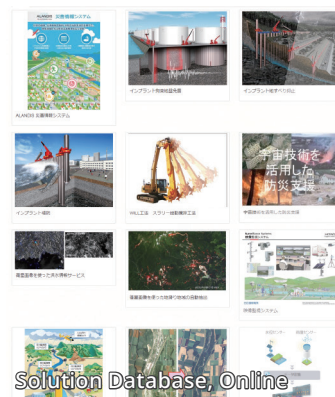

We see achieving the Sendai Framework for Disaster Risk Reduction and the Sustainable Development Goals (SDGs) as core to our existence. Reciprocally, the Sendai Framework specifically validates our very being, and our policy and strategic direction – stating it is a key role of the private sector to reduce disaster risks through developing and disseminating appropriate DRR technologies, and through strengthening partnerships with various other sectors.

Activities

JBP's free online database, the Bosai Solution Database

JBP's Bosai Solution Database assists local and central government agencies in finding the most appropriate technology to meet their needs. Solution Database is a database of cutting-edge bosai technologies, developed by JBP member companies, with proven track records. Solution Database serves as a virtual shopping mall of bosai solution providers. Interested parties can search for appropriate technologies to meet their needs, and send inquiries, all directly through Solution Database.

Solution Database, Online

JBP arranges and conducts bosai technology seminars in various countries

JBP will organize bosai technical seminars at the clients' locale, and send teams to participate in events, on request. In such cases, JBP gathers member companies interested in presenting their bosai technologies to meet the indicated need. In 2016-2017, JBP conducted such outreach in Indonesia, Vietnam, Myanmar, Turkey, Taiwan, Canada, the U.S.A, Mexico and Romania.

Tech 4 BOSAI

JBP arranges bosai technology seminars in Japan for visiting teams

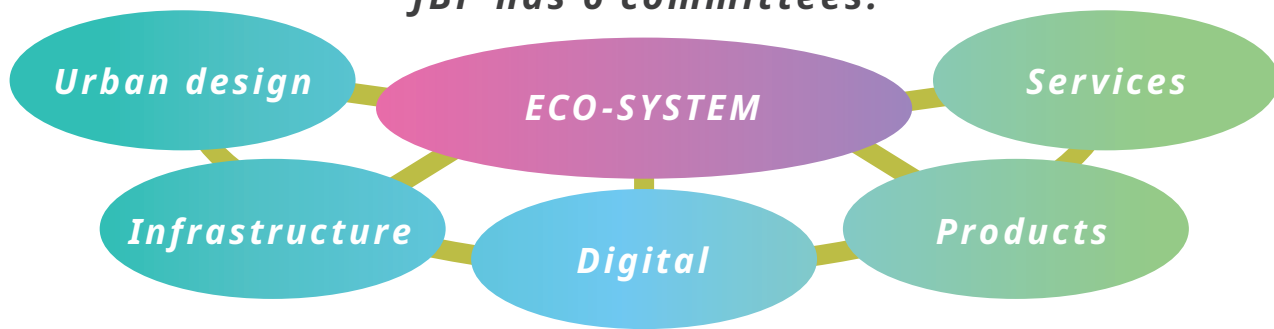

Every year, many bosai-related personnel visit Japan to learn from disaster risk management practices in Japan. Their training programmes previously only took them to various government and civil society organizations to observe and learn from their experiences and know-how on bosai. However, most bosai technologies used in Japan are developed, provided and maintained by private companies.

JBP now provides bosai technology seminars for many bosai trainees in Japan.

Seminar for Indonesian
government officials

JBP has 6 committees.

All members are part of these committees.
